This New York Times/Siena College survey of 604 likely voters in Georgia was conducted in English and Spanish on landline and cellular telephones from October 24-27, 2022. The survey is a response rate adjusted stratified sample of active registered voters on the L2 voter file. The survey was fielded by the Siena College Research Institute with support from ReconMR, IPOR (Roanoke College) and PORL (University of North Florida). The survey's margin of error for the likely electorate due to sampling is +/- 4.8%. It accounts for the survey's design effect, a measure of the loss of statistical power due to weighting. The Siena College Research Institute, directed by Donald Levy, Ph.D., conducts political, economic, social, and cultural research. SCRI, an independent, non-partisan research institute, subscribes to the American Association of Public Opinion Research Code of Professional Ethics and Practices. For more information, please contact Don Levy at 518-783-2901.

A more extensive description of sampling parameters and weighting can be found at:
