This AARP/Siena College Poll was conducted April 28 - May 1, 2025, among 813 NJ Registered Voters Age 50+. Of the 813 respondents, 613 were contacted through a dual frame (landline and cell phone) mode (325 completed via text to web) and 200 respondents were drawn from a proprietary online panel (Cint). Telephone calls were conducted in English and respondent sampling was initiated by asking for the registered voter in the household. Telephone sampling was conducted via a stratified dual frame registered voter list of landline and cell phone telephone numbers weighted to reflect known population patterns. The telephone sample was obtained from MSG using the L2 voter list. Data from collection modes was statistically adjusted by age, region, race/ethnicity, education, party, and gender to ensure representativeness. It has an overall margin of error of +/- 3.8 percentage points including the design effects resulting from weighting. There are 454 Democrats or Democratic leaning voters with a margin of error of +/-6.4%.

The Siena College Research Institute, directed by Donald Levy, Ph.D., conducts political, economic, social, and cultural research primarily in NYS. SCRI, an independent, non-partisan research institute, subscribes to the American Association of Public Opinion Research Code of Professional Ethics and Practices.
