This NY04 Newsday Poll was conducted October 13 - October 17, 2024, among 532 CD04 Likely Voters. Telephone calls were conducted in English and respondent sampling was initiated by asking for the youngest person in the household. Telephone sampling was conducted via a stratified dual frame probability sample of landline and cell phone telephone numbers weighted to reflect known population patterns. The sample of landline and cell phone drawn from the L-2 database of registered voters (532 completed via telephone). Data from collection modes was weighted to balance sample demographics to match estimates for New York State's population using data from the Census Bureau's 2023 U.S. American Community Survey (ACS), on age, region, race/ethnicity, education, and gender to ensure representativeness. The sample was also weighted to match current patterns of party registration using data from the New York State Board of Elections. It has an overall margin of error of +/- 4.4 percentage points including the design effects resulting from weighting. Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other public opinion poll.

The Siena College Research Institute, directed by Donald Levy, Ph.D., conducts political, economic, social, and cultural research primarily in NYS. SCRI, an independent, non-partisan research institute, subscribes to the American Association of Public Opinion Research Code of Professional Ethics and Practices.
